EVERYONE ON THE ROAD TO OPEN SCIENCE

OPEN EDUCATIONAL
RESOURCES

OPEN DATA

CITIZEN
SCIENCE

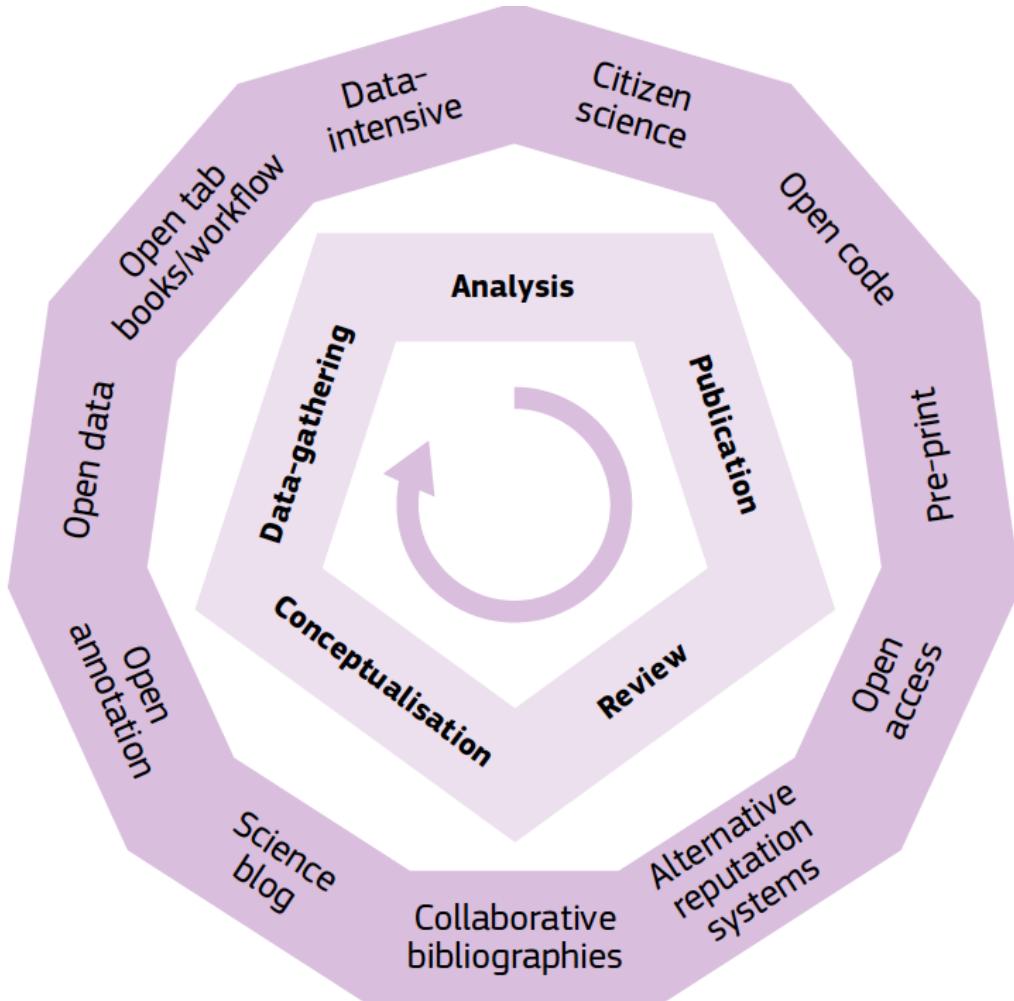

¿Open Science?

Open Science is the **practice of science** in such a way that others can **collaborate and contribute**, where research data, lab notes and other research processes are **freely available**, under terms that **enable reuse, redistribution and reproduction** of the research and its **underlying data and methods**.

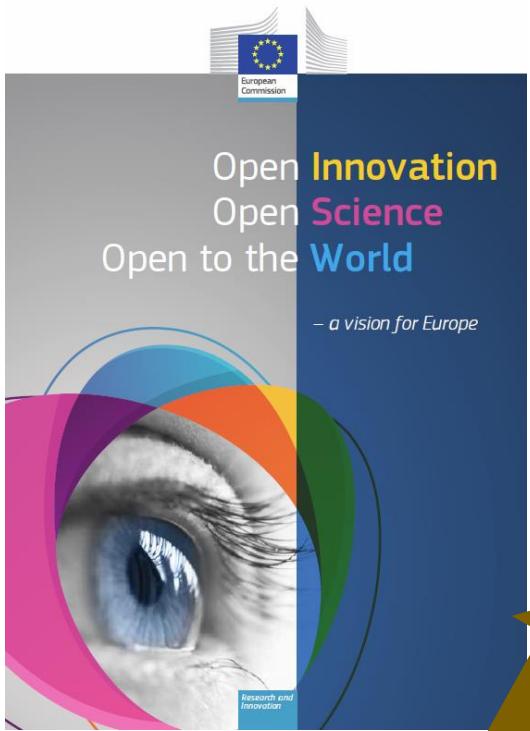

[FOSTER, Open Science Definition: <https://www.fosteropenscience.eu/foster-taxonomy/open-science-definition>]

FOSTER define Ciencia Abierta como **la práctica de la ciencia** de tal manera que otros puedan **colaborar y contribuir, donde los datos de investigación, las notas de laboratorio y otros procesos de investigación estén disponibles de manera gratuita**, bajo términos que permitan la **reutilización, redistribución y reproducción** de la investigación y de sus datos y métodos subyacentes.

(2014)

*'Science 2.0' (then coined open science) as a **holistic approach**, therefore, is much more than only one of its features (such as Open Access) and represents a **paradigm shift in the modus operandi of research** and science impacting the entire scientific process"*

(2015)

From “classic publication”
to new ways of sharing

Collaboration

Change to the system

Digital technology

“Open Science represents a new approach to the scientific process **based on cooperative work and new ways of diffusing knowledge** by using **digital technologies and new collaborative tools**. The idea captures a **systemic change to the way science and research** have been carried out for the last fifty years: **shifting from the standard practices** of publishing research results in scientific publications **towards sharing** and using all available knowledge at an earlier stage in the research process.

open science

*"Open science commonly refers to efforts to make the **output of publicly funded research more widely accessible** in digital format to the scientific community, the business sector, or society more generally".*

Amsterdam Call for Action
on Open Science

This document is a living document reflecting the present state of open science evolution. It is based on the input of many participating experts and stakeholders of the Amsterdam Conference ‘Open Science – From Vision to Action’, hosted by the Netherlands’ EU Presidency on 4 and 5 April 2016.

Formulated to reach two important pan-European goals for 2020:

- 1. Full open access for all scientific publications**
- 2. A fundamentally new approach towards optimal reuse of research data**

To reach these goals by 2020 we need flanking policy:

- New assessment, reward and evaluation systems**
- Alignment of policies and exchange of best practices**

<http://english.eu2016.nl/documents/reports/2016/04/04/amsterdam-call-for-action-on-open-science>

Council of the

RECH 208
TELECOM 100

OUTCOME OF PROCEEDINGS

From: General Secretariat of the Council
To: Delegations
No. prev. doc.: 8791/16 RECH 133 TELECOM 74
Subject: The transition towards an Open Science system
- Council conclusions (adopted on 27/05/2016)

Science ministers from European Union nations AGREED last month to **make publicly funded research publications freely available by 2020**. Each country will implement its own publication policy.

The Council:

UNDERLINES the principle for the optimal reuse of research data should be: "**as open as possible, as closed as necessary**".

EMPHASIZED that the opportunities for the optimal reuse of research data can only be realised if data are consistent with the FAIR principles (findable, accessible, interoperable and reusable) within a secure and trustworthy environment

Amsterdam April 2016

“open access to research results – both publications and research data – is not just a luxury” (N. Kroes, 2012)

H2020 Programme

Guidelines to the Rules on
Open Access to Scientific Publications
and
Open Access to Research Data
in Horizon 2020

Version 3.2
21 March 2017

For the 2016-2017 Work Programme, the areas of Horizon 2020 participating in the Open Research Data Pilot are:

- Future & Emerging Technologies
- Research infrastructures
- Leadership in enabling & industrial technologies – Information & Communication Technologies
- Nanotechnologies, Advanced Materials, Advanced Manufacturing & Processing, & Biotechnology – 'nanosafety' & 'modelling' topics
- Societal Challenge – Food security, sustainable agriculture & forestry, marine & maritime & inland water research & the bioeconomy - selected topics as specified in the work programme
- Societal Challenge – Climate Action, Environment, Resource Efficiency & Raw Materials – except raw materials
- Societal Challenge – Europe in a changing world – inclusive, innovative & reflective societies
- Science with & for Society
- Cross-cutting activities – focus areas – part Smart & Sustainable Cities

From 1 January 2017 all areas were included in the Pilot

References to research data management are included in Article 29.3 of the Model Grant Agreement (article applied to all projects participating in the Pilot on Open Research Data in Horizon 2020).

29.3 Open access to research data

[OPTION for actions participating in the open Research Data Pilot: Regarding the digital research data generated in the action ('data'), the beneficiaries must:

(a) deposit in a research data repository and take measures to make it possible for third parties to access, mine, exploit, reproduce and disseminate — free of charge for any user — the following:

(i) the data, including associated metadata, needed to validate the results presented in scientific publications as soon as possible;

(ii) other data, including associated metadata, as specified and within the deadlines laid down in the 'data management plan' (see Annex 1);

(b) provide information — via the repository — about tools and instruments at the disposal of the beneficiaries and necessary for validating the results (and — where possible — provide the tools and instruments themselves).

Horizon 2020 already mandates open access to all scientific publications

From 2017,
research data is
open by default,
with possibilities to opt out

https://ec.europa.eu/research/press/2016/pdf/opendata-infographic_072016.pdf

RESEARCH DATA - OPEN BY DEFAULT

HORIZON 2020 GRANTEES ARE REQUIRED

take measures to ensure
open access to the **data**
underlying their scientific
publications

provide open access to **any**
other research data of their
choice

Horizon 2020
grantees are
encouraged to also
share datasets
beyond publication

PROJECTS MUST HAVE

Provides information on:

the **data** the research
will generate

how to ensure its
curation, preservation and
sustainability

what parts of that data
will be open (and how)

Data management
costs are fully eligible
for funding

No repository imposed:
deposit data where
you want

AS OPEN AS POSSIBLE, AS CLOSED AS NECESSARY

Grantees have the right to opt-out, but need to say why

Top three reasons for opt-out:

intellectual
property rights

privacy

might jeopardise
project's main
objective

The approach has been tested during a Horizon 2020 pilot action

2015

of 431 signed projects

65.4%

opted to share data

from 2017

the current
Open Research Data Pilot
expands to cover all areas of
Horizon 2020,

 **ESFRI**

The ESFRI Roadmap 2016
The ESFRI Roadmap 2016 identifies the new Research Infrastructures (RI) of pan-European interest corresponding to the long term needs of the European research communities, covering all scientific areas, regardless of possible location.

The 2016 Roadmap consists of 21 ESFRI Projects with a high degree of maturity - including 6 new Projects - and 29 ESFRI Landmarks - RIs that reached the implementation phase by the end of 2015.

The ESFRI Roadmap 2016 was launched on 10 March 2016, in Amsterdam. The event was organized under the [Dutch Presidency](#) by the Royal Netherlands Academy of Arts and Sciences (KNAW) in close cooperation with ESFRI, the European Commission and the Dutch Ministry of Education, Culture and Science. Discussions focused on strategic roadmapping, long-term sustainability and the socio-economic impact of research infrastructures.

European Open Science Cloud

20 June 2016 – first draft report from the High Level Expert Group

The Commission High Level Expert Group on the European Open Science Cloud (HLEG EOSC) has drafted their first report, which the Commission will publish shortly after the summer.

Enquiries can be made directly to members of the HLEG EOSC and/or to the Commission at RTD-EOSC@ec.europa.eu.

19 April 2016 – European Open Science Cloud

Giving a major boost to Open Science in Europe, the Commission today presented its blueprint for cloud-based services and world-class data infrastructure to ensure science, business and public services reap benefits of big data revolution.

By bolstering and interconnecting existing research

**E-INFRASTRUCTURES:
MAKING EUROPE THE BEST PLACE
FOR RESEARCH AND INNOVATION.**

A cartoon illustration of three scientists standing in front of a map of Europe. From left to right: a man with glasses and a tie, a man with wild orange hair pointing upwards, and a woman with glasses and a yellow vest. The background features a blue map of Europe with various scientific symbols like atoms and chemical structures overlaid.

A landmark agreement sustaining the pan European Collaborative Data Infrastructure for the next 10 years

3rd October 2016

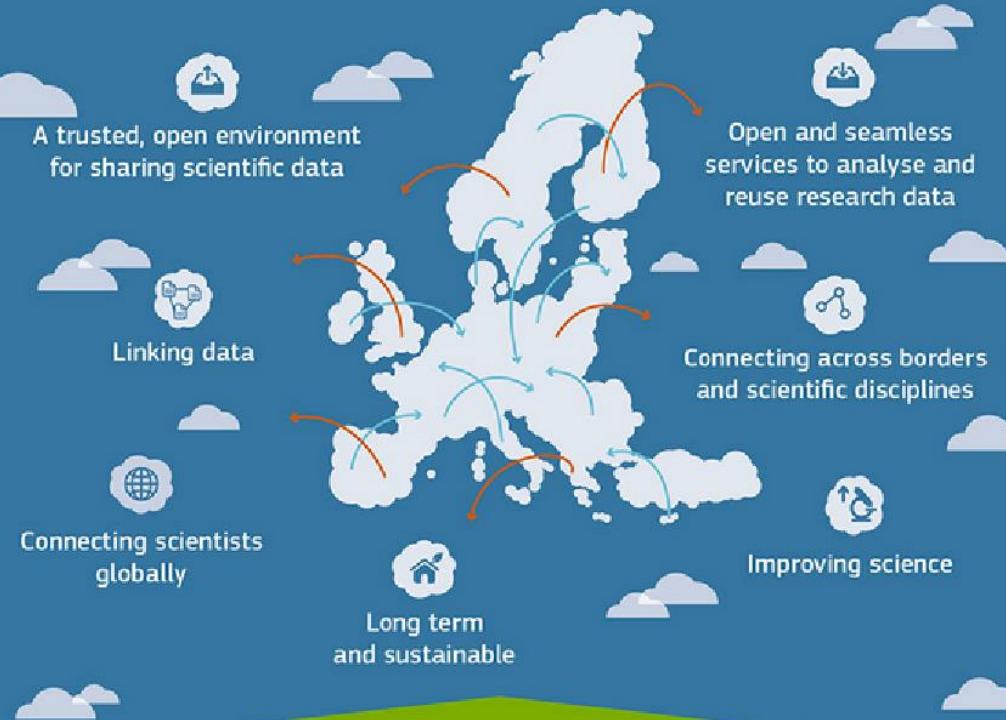

16 major European research organisations, data and computing centres signed an agreement to sustain the EUDAT – pan European collaborative data infrastructure for the next 10 years. The organisations stand together behind a long term sustainability plan and commit to develop, maintain and deploy pan-European research data services and to promote harmonization of research data management practices across centres.

What does this mean?

Service providers, both generic and thematic, and research communities have joined forces as part of a common framework for developing an interoperable layer of common data services. Known as the EUDAT Collaborative Data Infrastructure (CDI), this is essentially a European e-infrastructure of integrated data services and resources to support research. This infrastructure and its services have been developed in close collaboration with over 50 research communities spanning across many different scientific disciplines and involved at all stage of the design process. The establishment of the EUDAT CDI is timely with the imminent realization of the European Open Science Cloud^[1] which aims to offer open and seamless services for storage, management, analysis and re-use of research data, across borders and scientific disciplines.

EOSCpilot Building Blocks

Science Demonstrators	Service Pilots <i>Federating data, infrastructure and services fostering multidisciplinary research across geographical borders and across time (through data preservation).</i>
Service Pilots	
Interoperability Architecture	
Governance Framework	DISCOVER MORE

EOSCpilot Mission

- Facilitating access** of researchers across all scientific disciplines to data
- Establishing a **governance** and **business model** that sets the rules for the use of EOSC
- Creating a **cross-border** and **multi-disciplinary open innovation environment** for research data, knowledge and services
- Establishing global standards for interoperability for scientific data

<http://eoscpilot.eu/about/eoscpilot-brief>

“The European Open Science Cloud is a supporting environment for Open science and not an ‘open cloud’ for science”

Science Demonstrators

Science Demonstrators show the relevance and usefulness of EOSC Services and how they enable data reuse, and will drive EOSC development.

The aim of the EOSCpilot Science Demonstrators is to show the relevance of Services and their enabling of data reuse, to drive the EOSC development.

5 Science Demonstrators started at the project outset (listed below included through EOSCpilot Open Calls for Science Demonstrators):

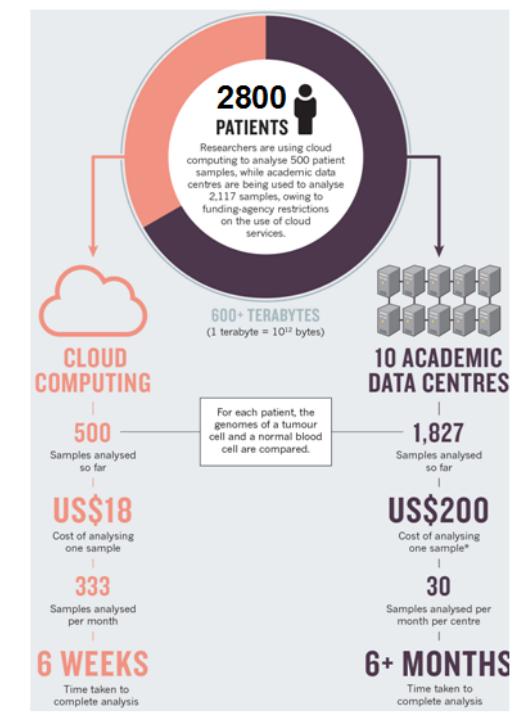

- **Environmental & Earth Sciences** - ENVRI Radiative Forcing Integration to enable reuse across multiple research communities by working on data integration and harmonization
- **High Energy Physics** - WLCG: large-scale, long-term data preservation and re-use: the deployment of HEP data in the EOSC open to other research communities
- **Social Sciences** - TEXTCROWD: Collaborative semantic enrichment of text-based new software to enable a semantic enrichment of text sources and make it available
- **Life Sciences** - Pan-Cancer Analyses & Cloud Computing within the EOSC to access the EOSC and reuse solutions in other areas (e.g. for cardiovascular & neurosciences)
- **Physics** - The photon-neutron community to improve the community's computing virtual platform for all users (e.g., for users with no storage facilities at their home institution)

Aim: to show the relevance of services and enabling of data use, to drive EOSC development

Major European Cloud Use-Case in Genomics: The Pan-Cancer Analysis of Whole Genomes Project (PCAWG)

- **Mission of PCAWG phase I:** joint reanalysis of **2,800 cancer genomes**, 1 Pb of DNA data, using hybrid clouds.
- **Global network** (includes USA, Canada, Japan, Korea, Europe)
- **European leadership** (until recently co-funded by EC / Eurocan-Platform).

- Our initial focus has been on **standardizing genomic data processing**, and data redistribution, **on the cloud**.
- We aim to make these processes **inter-operable for the EOSC**.
- Outcomes of PCAWG phase I are intended to be published in **2017**.

**The International Cancer
Genome Consortium (ICGC)**

Introducing Zenodo!

(All) Research.
Shared.

– your one stop research shop!

all research outputs from across all fields of research are welcome! Zenodo accepts any file format as well as both positive and negative results. We choose to promote peer-reviewed openly accessible research, and we curate the uploads posted on the front-page.

Citeable.
Discoverable.

– be found!

Zenodo assigns all publicly available uploads a Digital Object Identifier (DOI) to make the upload easily and uniquely citeable. Zenodo further supports harvesting of all content via the OAI-PMH protocol.

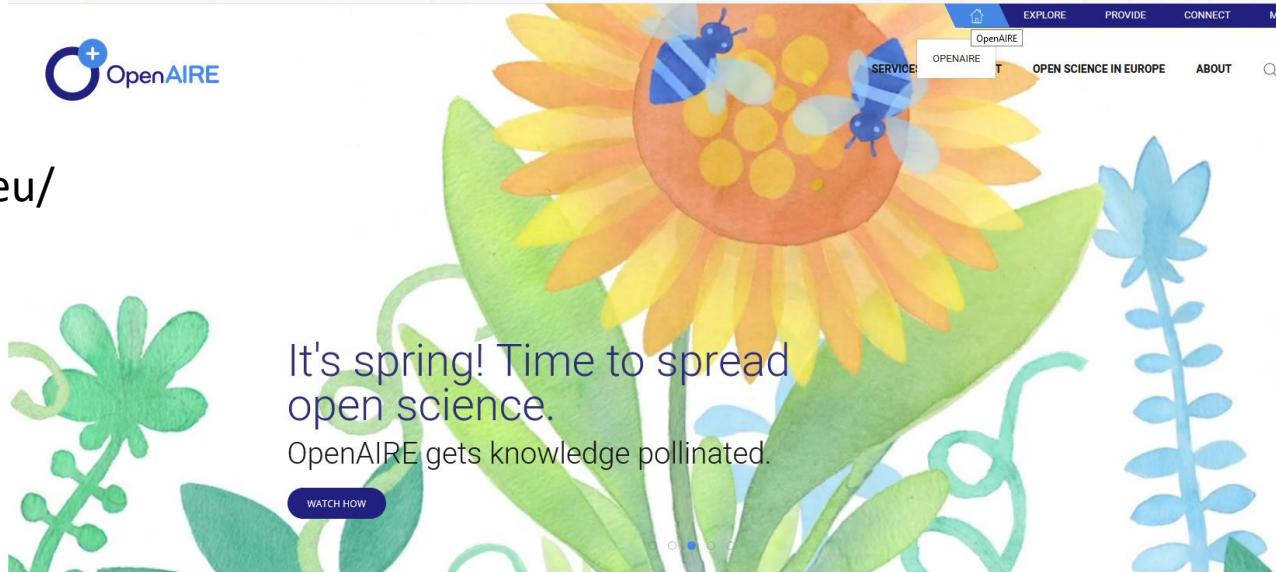

Communities

– create your own repository

Zenodo allows you to create your own collection and accept or reject uploads submitted to it. Creating a space for your next workshop or project has never been easier.

Plus, everything is citeable and discoverable!

Horizon Europe will also introduce several new main features:

- A European Innovation Council (EIC) to help the EU become a frontrunner in market-creating innovation.
- New EU-wide research and innovation missions focusing on societal challenges and industrial competitiveness.
- Maximising the innovation potential across the EU.
- **The principle of 'open science' will become the modus operandi of Horizon Europe, requiring open access to publications and data.**
- A new generation of European Partnerships and increased collaboration with other EU programmes.

The new programme will be implemented through three pillars:

Pillar 1

Open Science

European Research Council

Marie Skłodowska-Curie Actions

Infrastructures

Pillar 2

Global Challenges and Industrial Competitiveness

Clusters

- Health
- Inclusive and Secure Society
- Digital and Industry
- Climate, Energy and Mobility
- Food and natural resources

Joint Research Centre

Pillar 3

Open Innovation

European Innovation Council

European innovation ecosystems

European Institute
of Innovation and Technology

Strengthening the European Research Area

Sharing excellence

Reforming and Enhancing the European R&I system

Conclusions OS in Horizon Europe

Horizon Europe Regulation

Open Science as *modus operandi*

- Promote OS: science communication and citizen science, among others, e.g. through a combination of obligations and incentives (possibly also in the evaluation of proposals)
- Sanctions for those grant beneficiaries (e.g. not necessarily the same as researchers) that repeatedly and consistently fail to provide the required OA
- Appropriate metrics for better assessing the impact of research output and engagement in open science

Comunicación participación

Seguimiento/sanciones

Métricas “adecuadas”

Main elements of Open Science in Horizon Europe

Horizon Europe Regulation

Open access to publications ensured (=no way around this! 😊)

Open access to research data: ‘as open as possible as closed as necessary’

Responsible management of research data: Data Management Planning, FAIR data, long-term preservation of data

Open science practices promoted and encouraged; may provide additional incentives or obligations to adhere to open science practices

May require additional obligations to use EOSC for storing and giving access to research data

Authors/beneficiaries must retain enough rights for open access

Exceptions to open access for research data described

Proposals for research data in Horizon Europe

Horizon Europe Regulation

Mainstream RDM with mandatory DMP

- For all projects that generate, collect, re-use research data
- No exceptions to DMP requirement for such projects

Open by default

- Unless exceptions apply- not an ‘opting-out’ but an exception, moving beyond the pilot phase!

FAIR research data

- Identifiers, trusted repositories, machine-readable licenses, among other requirements

Use of European Open Science Cloud required

- In some Work Programmes

Horizon Europe policy regarding research data (draft)

**COMMISSION RECOMMENDATION (EU) 2018/790
of 25 April 2018 on access to and preservation of scientific information**
<https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:32018H0790>

- Open access to scientific publications
- Research data management, including open access
- Preservation and reuse of scientific information
- Infrastructures for open science
- Skills and competences
- Incentives and rewards
- Multi-stakeholder dialogue on open science at national, European and international level
- Structured coordination of Member States at Union level and follow-up to this Recommendation

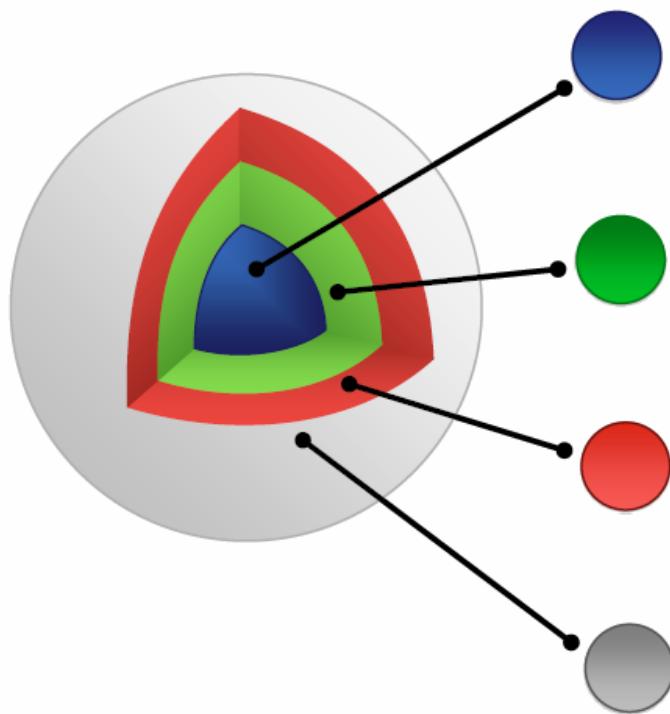

Directive (EU) 2019/1024 of the European Parliament and of the Council of 20 June 2019 on open data and the re-use of public sector information

“...The Commission Recommendation of 25 April 2018 on access to and preservation of scientific information describes, among other things, relevant elements of open access policies. Additionally, the conditions, under which certain research data can be re-used, should be improved. For that reason, certain obligations stemming from this Directive should be extended to research data resulting from scientific research activities subsidised by public funding or co-funded by public and private-sector entities. Under the national open access policies, publicly funded research data should be made open as the default option. However, in this context, concerns in relation to privacy, protection of personal data, confidentiality, national security, legitimate commercial interests, such as trade secrets, and to intellectual property rights of third parties should be duly taken into account, according to the principle ‘as open as possible, as closed as necessary’...”

About research data

'any information that has been collected, observed, generated or created to validate original research findings'

Turning FAIR data into reality. Interim report from the European Commission Expert Group on FAIR data

DATA

The core bits

At its most basic level, data is a bitstream or binary sequence. For data to have meaning and to be FAIR, it needs to be represented in standard formats and be accompanied by Persistent Identifiers (PIDs), metadata and code. These layers of meaning enrich the data and enable reuse.

IDENTIFIERS

Persistent and unique (PIDs)

Data should be assigned a unique and persistent identifier such as a DOI or URN. This enables stable links to the object and supports citation and reuse to be tracked. Identifiers should also be applied to other related concepts such as the data authors (ORCIDs), projects (RAIDs), funders and associated research resources (RRIDs).

STANDARDS & CODE

Open, documented formats

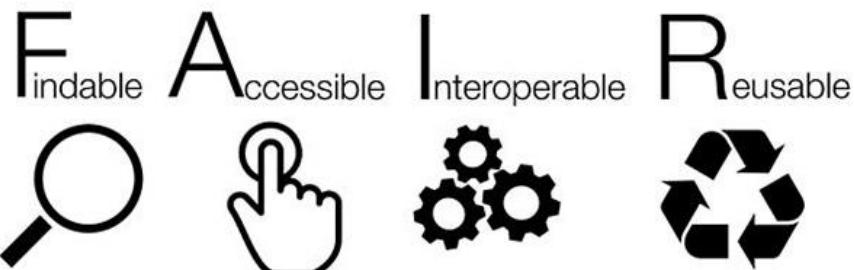

Data should be represented in common and ideally open file formats. This enables others to reuse the data as the format is in widespread use and software is available to read the files. Open and well-documented formats are easier to preserve. Data also need to be accompanied by the code used to process and analyse the data.

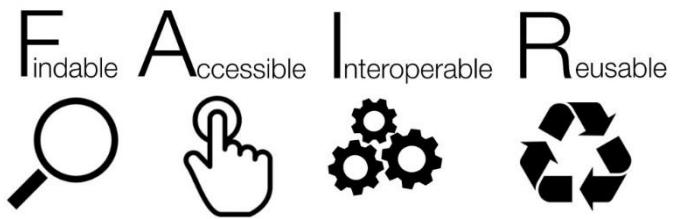

METADATA

Contextual documentation

In order for data to be assessable and reusable, it should be accompanied by sufficient metadata and documentation. Basic metadata will enable data discovery, but much richer information and provenance is required to understand how, why, when and by whom the data were created. To enable the broadest reuse, data should be accompanied by a 'plurality of relevant attributes' and a clear and accessible data usage license.

Model for FAIR data objects

Findable

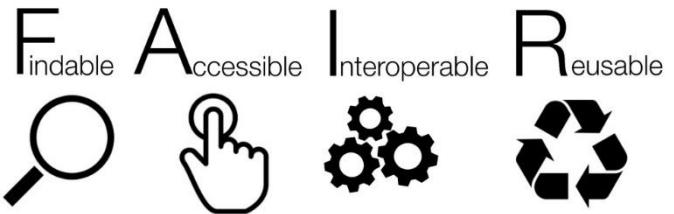

The first step in (re)using data is to find them. Metadata and data should be easy to find for both humans and computers.

- F1. (Meta)data are assigned a globally unique and persistent identifier
- F2. Data are described with rich metadata (defined by R1 below)
- F3. Metadata clearly and explicitly include the identifier of the data they describe
- F4. (Meta)data are registered or indexed in a searchable resource

Accessible

Once the user finds the required data, she/he needs to know how can they be accessed, possibly including authentication and authorisation.

- A1. (Meta)data are retrievable by their identifier using a standardised communications protocol
 - A1.1 The protocol is open, free, and universally implementable
 - A1.2 The protocol allows for an authentication and authorisation procedure, where necessary
- A2. Metadata are accessible, even when the data are no longer available

Interoperable

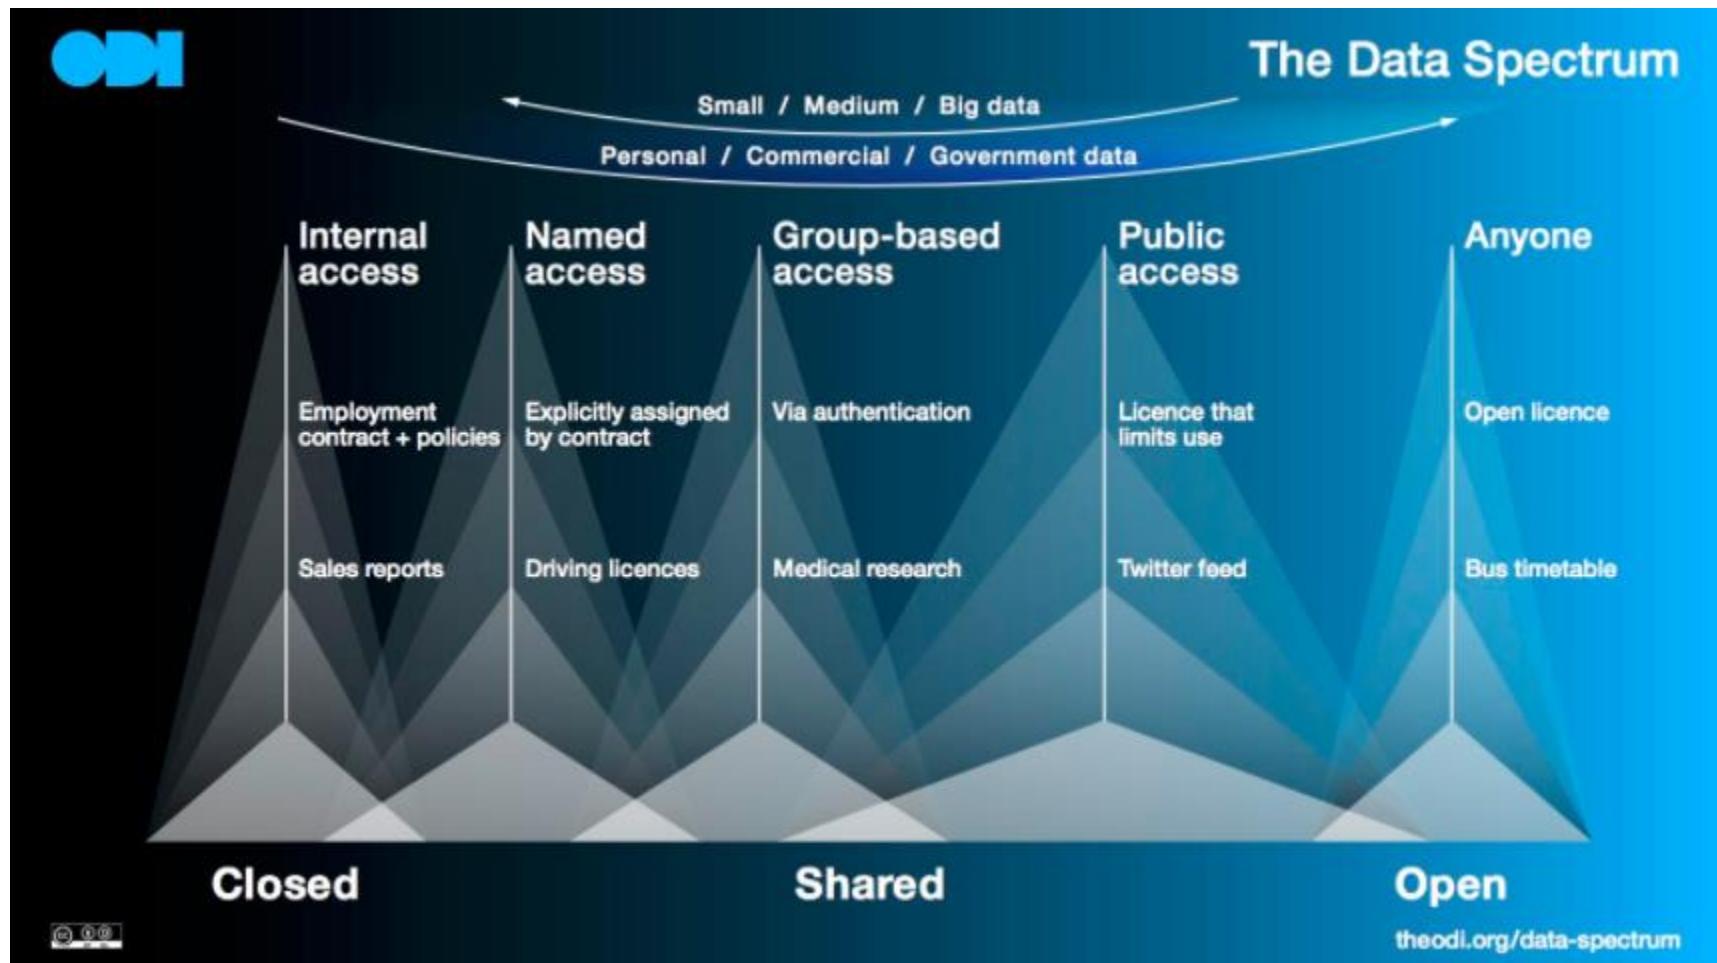

The data usually need to be integrated with other data. In addition, the data need to interoperate with applications or workflows for analysis, storage, and processing.

- I1. (Meta)data use a formal, accessible, shared, and broadly applicable language for knowledge representation.
- I2. (Meta)data use vocabularies that follow FAIR principles
- I3. (Meta)data include qualified references to other (meta)data

Reusable

The ultimate goal of FAIR is to optimise the reuse of data. To achieve this, metadata and data should be well-described so that they can be replicated and/or combined in different settings.

- R1. Meta(data) are richly described with a plurality of accurate and relevant attributes
 - R1.1. (Meta)data are released with a clear and accessible data usage license
 - R1.2. (Meta)data are associated with detailed provenance
 - R1.3. (Meta)data meet domain-relevant community standards

<https://amnesia.openaire.eu/>

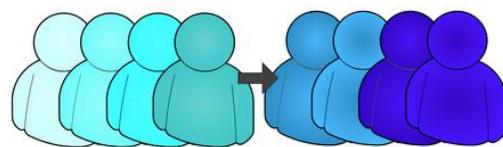

Anonimización de datos

Home Get Amnesia! What is Amnesia? Documentation On-line version
About

Amnesia

Amnesia is a data anonymization tool, that allows to remove identifying information from data. Amnesia not only removes direct identifiers like names, SSNs etc but also transforms secondary identifiers like birth date and zip code so that individuals cannot be identified in the data. Amnesia supports k -anonymity and k^m -anonymity.

AS OPEN AS POSSIBLE, AS CLOSED AS NECESSARY

Grantees have the right to opt-out, but need to say why

Top three reasons for opt-out:

- privacy
- intellectual property rights
- might jeopardise project's main objective

The approach has been tested during a Horizon 2020 pilot action

2015
of 431 signed projects
65.4% opted to share data

from 2017
the current Open Research Data Pilot expands to cover all areas of Horizon 2020, with the same rules

At national level (Spain) regarding research data

- Open Science/Open access funders' policies
- Open Science/Open Access institutional policies
- Repositories
- Data Management plans

La [Estrategia española de ciencia y tecnología y de innovación 2013-2020](#) contempla el uso coherente de **seis** mecanismos de articulación entre ellas el “acceso abierto a datos y microdatos”:

“ACCESO ABIERTO a datos y microdatos, así como a las publicaciones y resultados de la investigación financiada con fondos públicos, incorporando la elaboración de directrices que proporcionen repositorios propios o compartidos”

Posteriormente, el [Plan estatal de investigación científica y técnica y de innovación 2017-2020](#) contempla la posibilidad de que los proyectos de I+D+i financiados incluyan, con carácter voluntario, un [plan de gestión de los datos de investigación](#) que se depositarán en repositorios institucionales; teniendo en cuenta que, en todo caso, “se respetarán todas las situaciones en las que los mismos han de protegerse por razones de confidencialidad, seguridad, protección, etc. o cuando los mismos sean necesarios para la explotación comercial de los resultados obtenidos”.

2. TRANSPARENCIA Y RENDICIÓN DE CUENTAS de las ayudas concedidas y del proceso de concesión de las mismas, incluyendo:

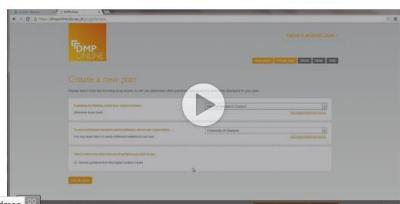

- ...
- ACCESO ABIERTO A RESULTADOS Y DATOS DE INVESTIGACIÓN de las actividades de investigación subvencionadas con recursos públicos. **Los trabajos publicados en revistas científicas financiados a través del Plan Estatal se depositarán en repositorios, institucionales y/o internacionales, en abierto** teniendo en cuenta las características específicas de las distintas materias, en cumplimiento de lo establecido en el Artículo 37 de la Ley 14/2011, de 1 de junio, de la Ciencia, la Tecnología y la Innovación y de las recomendaciones vinculadas a la agenda europea en materia de acceso abierto y ciencia en abierto. Con el fin de impulsar el acceso a datos de investigación, los proyectos de I+D+i financiados podrán incluir, con carácter optativo, un plan de gestión de los datos de investigación que se depositarán en repositorios institucionales, nacionales y/o internacionales tras la finalización del proyecto y transcurrido el plazo establecido en las correspondientes convocatorias. No obstante, se respetarán todas las situaciones en las que los mismos han de protegerse por razones de confidencialidad, seguridad, protección, etc., o cuando los mismos sean necesarios para la explotación comercial de los resultados obtenidos. Finalmente, en la evaluación curricular de los investigadores así como en la evaluación ex post de las actuaciones financiadas se tendrán en cuenta los trabajos publicados en abierto en repositorios institucionales y temáticos, nacionales y/o internacionales, y la puesta de los datos de su investigación en abierto, de modo que puedan ser utilizados para replicar y reproducir los análisis y resultados de investigación.

PA GO DA - PIAn de Gestión de DATos

Crear su Plan de Gestión de Datos

El Plan de Gestión de Datos lo solicita un agente financiador como parte de las condiciones del contrato de subvención para un proyecto científico.

El Programa Horizonte 2020 requiere que los proyectos que formen parte del Piloto de Datos de Investigación en Abierto entreguen un Plan de Gestión de Datos completo durante los 6 primeros meses del proyecto.

Los planes de gestión de datos son una parte integral de las solicitudes de subvenciones - no pueden ser una idea de último momento; los revisores buscarán evidencia de que la gestión de datos está incluida en su propuesta, y que forma parte integral de su proceso de investigación. En el artículo 29.3 del H2020 Model Grant Agreement: Multi-beneficiary General MGA: December 2013 se establecen las obligaciones de los participantes en el Piloto de Datos de Investigación en Abierto en lo que respecta a la gestión de los datos.

El documento [Directrices sobre la Gestión de los Datos en Horizonte 2020](#) se dirige a los solicitantes y beneficiarios de los proyectos en el Marco del Piloto de Datos de Investigación en Abierto y su objetivo es proporcionar indicaciones sobre cómo pueden cumplir con sus responsabilidades con respecto a la calidad de los datos de investigación, su intercambio y su seguridad.
